BLD Con is a premier civil construction firm based in Victoria, boasting over a decade of experience in delivering high-quality infrastructure projects. We specialise in a comprehensive range of services including earthworks, roads, drainage, demolition, and bulk excavation, ensuring that we meet the diverse needs of our clients.

Our approach is characterised by a commitment to excellence and safety, encapsulated in our mission statement: 'Delivering safe exquisite projects'. We mobilise our resources efficiently to execute the scope of works with precision, adhering to stringent quality assurance protocols throughout the project lifecycle.

Our team comprises seasoned professionals, led by Director Darcy Wood, who brings 30 years of industry expertise to the table. Equipped with a modern fleet of plant and equipment, we ensure optimal performance and reliability in all our civil infrastructure projects. Our delivery approach is underpinned by a robust compliance framework that prioritises safety and client satisfaction.

At BLD Con, we are dedicated to practical completion and asset delivery, fostering strong relationships with local councils, state governments, and tier 1 contractors. Our unwavering commitment to compliance and quality assurance positions us as a trusted partner in the civil construction sector.

CORE SERVICES

- Earthworks: Our earthworks operations are designed to prepare sites for construction
- Roads: We specialise in the construction and rehabilitation of roads
- Drainage: Our drainage solutions are engineered to manage stormwater effectively
- Demolition: We execute demolition projects with meticulous planning and safety measures
- Bulk Excavation: Our bulk excavation capabilities allow us to handle large-scale earthmoving tasks

Ballarat Substation

Client: Vicroads

Location: Ballarat

Duration: 5 Months

Value: 4.3 M

At the Ballarat Substation project, we commenced by mobilising to remove 5000m² of fill from the site. Following this, we imported 4000T of class 3 rock to establish a robust pad for the substation. Our team then excavated all necessary electrical conduits, ensuring adherence to the project specifications.

Challenges

The project faced challenges related to tight local roads and maintaining positive relationships with local farmers. We implemented strategic planning and communication strategies to navigate these issues effectively.

Outcome

The project was successfully delivered four weeks ahead of schedule, showcasing our efficiency and commitment to client satisfaction.

Golden Plains Wind Farm

Client: Aura

Location: Golden Plains Shire

Duration: 8 Months

Value: 2.6M

For the Golden Plains Wind Farm, we initiated the project by grading and cutting the haul roads to facilitate access. We then excavated 4000m² of fill to create a level pad, followed by ground stabilisation using lime and cement before placing 5000T of Class 3 material. This meticulous approach ensured a solid foundation for the wind farm infrastructure.

Challenges

The main challenges included tight site access and ensuring the satisfaction of the general public. Our team employed effective logistical planning and community engagement to mitigate these challenges.

Outcome

We delivered the project well under budget and two months ahead of the scheduled finish date, demonstrating our capability to exceed client expectations.

PLANT & EQUIPMENT

Excavators

Our excavators are equipped for a variety of earthmoving tasks, providing the versatility needed for both small and large-scale projects.

Bulldozers

Bulldozers in our fleet are essential for site preparation and grading, ensuring a smooth and efficient workflow on every project.

Loaders

Loaders are utilised for material handling, offering high capacity and speed for efficient loading and transport of materials.

Graders

Our graders are critical for achieving precise surface grading, ensuring the highest standards of quality in road and pad construction.

Dump Trucks

Dump trucks in our fleet facilitate the quick and safe transport of materials, enhancing our operational efficiency on site.

Compactors

Compactors are used to ensure proper soil compaction, which is vital for the stability and longevity of civil infrastructure.

Stabiliser

Our stabiliser is employed for ground stabilisation, enhancing the load-bearing capacity of the soil for construction projects.

KEY PEOPLE

Darcy Wood

Director

With 30 years of experience in the civil construction industry, Darcy Wood has been instrumental in steering BLD Con towards excellence. His extensive knowledge and leadership skills ensure that projects are delivered on time, within budget, and to the highest standards of quality.

**We look forward to working with
you on your next project.**
